

CANCER CARE SURVEILLANCE

How frequently should cancer survivors be monitored for disease recurrence? Is more always better?

Featured PCORI-funded Study: Intensity of Post-Treatment surveillance and survival in Colorectal Cancer patients

Agenda

JUNE 23, 2019 • PCORI ENGAGEMENT AWARD

- Welcome
- Featured Guest
- Reactor Panel Questions and Discussion
- Audience Questions and Discussion
- Employer Insights
- Wrap up
- Survey

Welcome

Susan Frank

PCORI Engagement Award

Project Lead

National Alliance of Healthcare Purchaser
Coalitions

Lia Hotchkiss, MPH

Director, Engagement Award Program

PCORI

Featured Guest

George J. Chang, MD, MS, FACS, FASCRS

Deputy Chair, Department of Surgical Oncology

Chief, Colon and Rectal Surgery

Professor of Surgical Oncology | Professor of
Health Services Research

Director of Clinical Operations, Minimally
Invasive and New Technologies in Oncologic
Surgery Program

THE UNIVERSITY OF TEXAS

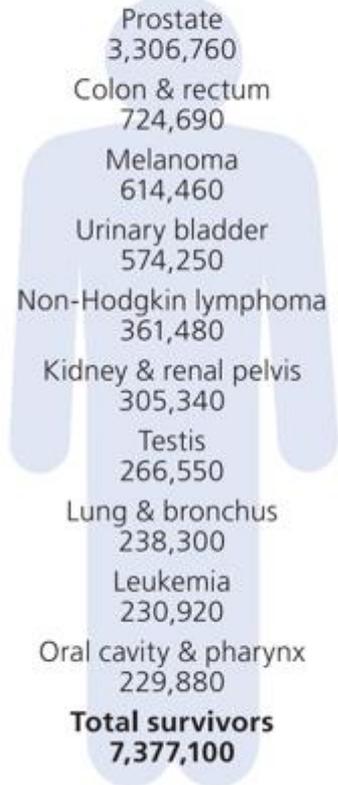

MD Anderson
~~Cancer Center~~[®]

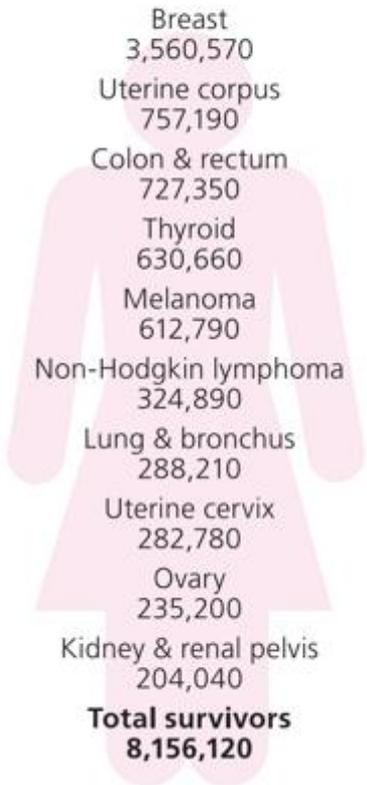

1.8 million Colorectal Cancer Survivors in US

As of January 1, 2016

Male

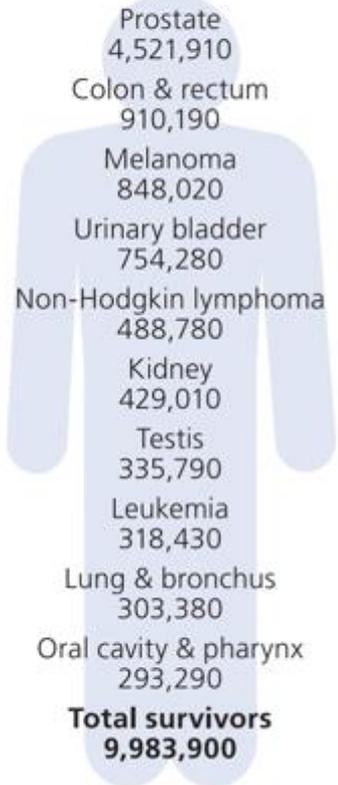

Female

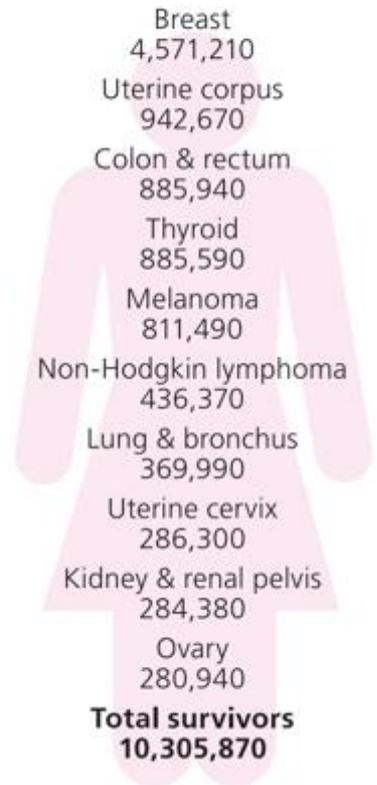

As of January 1, 2026

Male

Female

Goals of Surveillance

Detection of
Recurrence

Management of
long-term sequelae
of treatment

Post-treatment
Continuity of Care
Psychosocial well-being

Surveillance Testing Guidelines Vary Widely

American Society of Clinical Oncology

CT scan every 6-12 months

CEA every 3 months

5 years

NICE National Institute for Health and Care Excellence

CT scan twice in 3 years

CEA every 6 months

3 years

CLINICAL PRACTICE GUIDELINES

No further testing

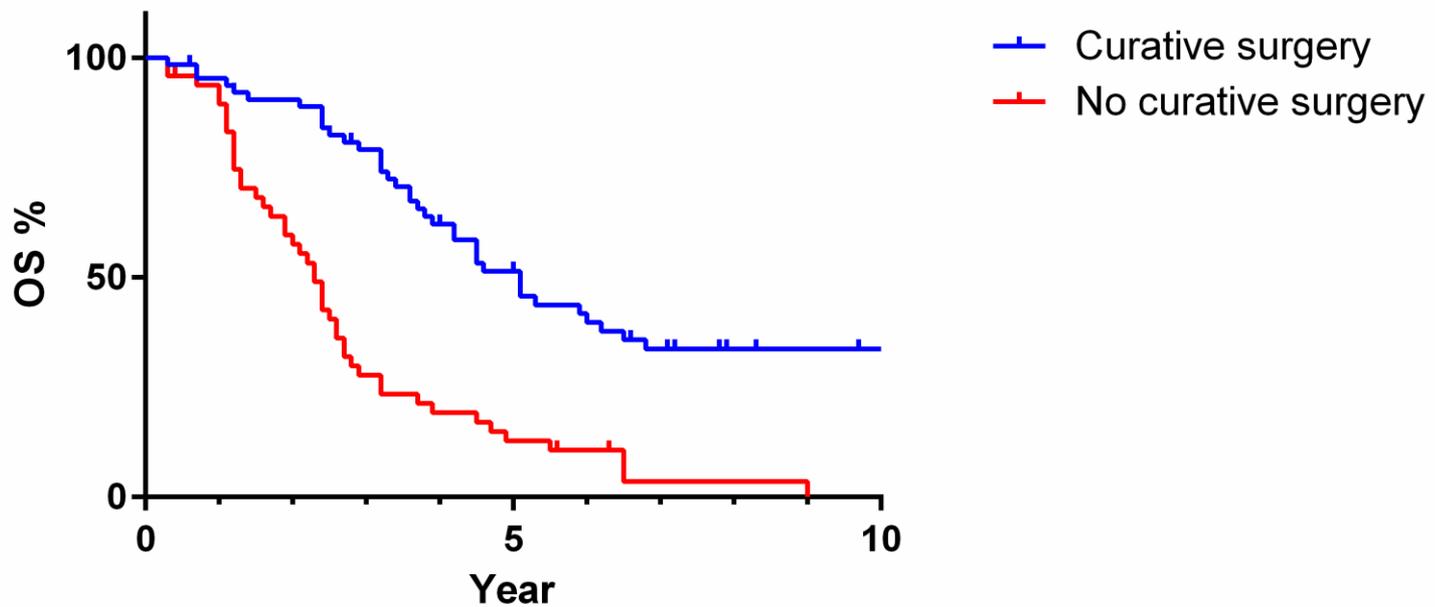

Impact of Recurrence and Salvage Surgery on Survival After Multidisciplinary Treatment of Rectal Cancer

Namshikho Ikoma, Y. Nancy Yiu, Brian K. Bafnanski, Miguel A. Rodriguez-Bigas, Cathy Eng, Prajnan Das, Scott Kopetz, Craig Mesick, John M. Skibber, and George J. Chang

A Overall Survival after Recurrence

Scanxiety (n) “scan zi et

ee”: Anxiety and worry that accompanies the period of time before undergoing or receiving the results of a medical examination (such as MRI or CT scan).

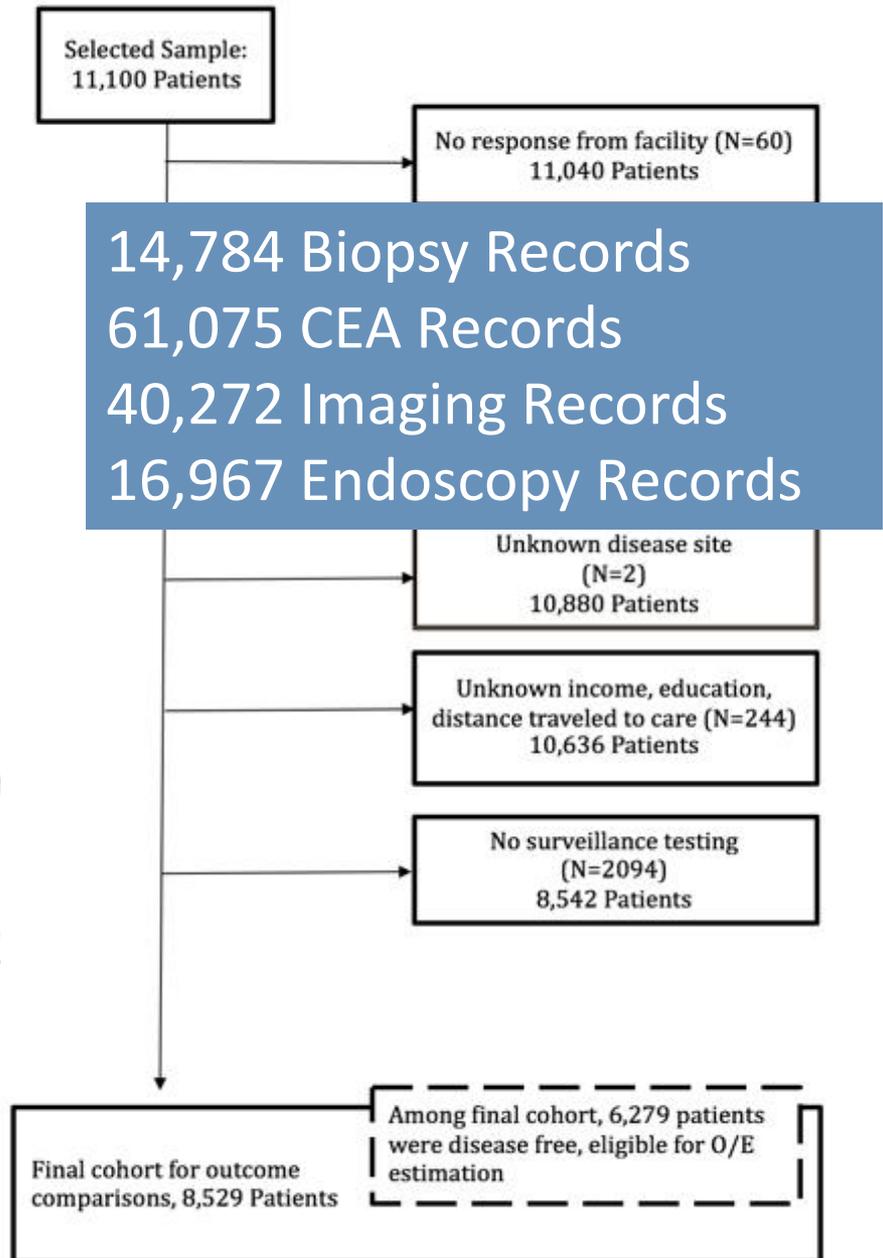

**X-RAY
IN USE**

Does Higher Surveillance Intensity Improve Detection of Recurrence or Survival?

Cohort Selection

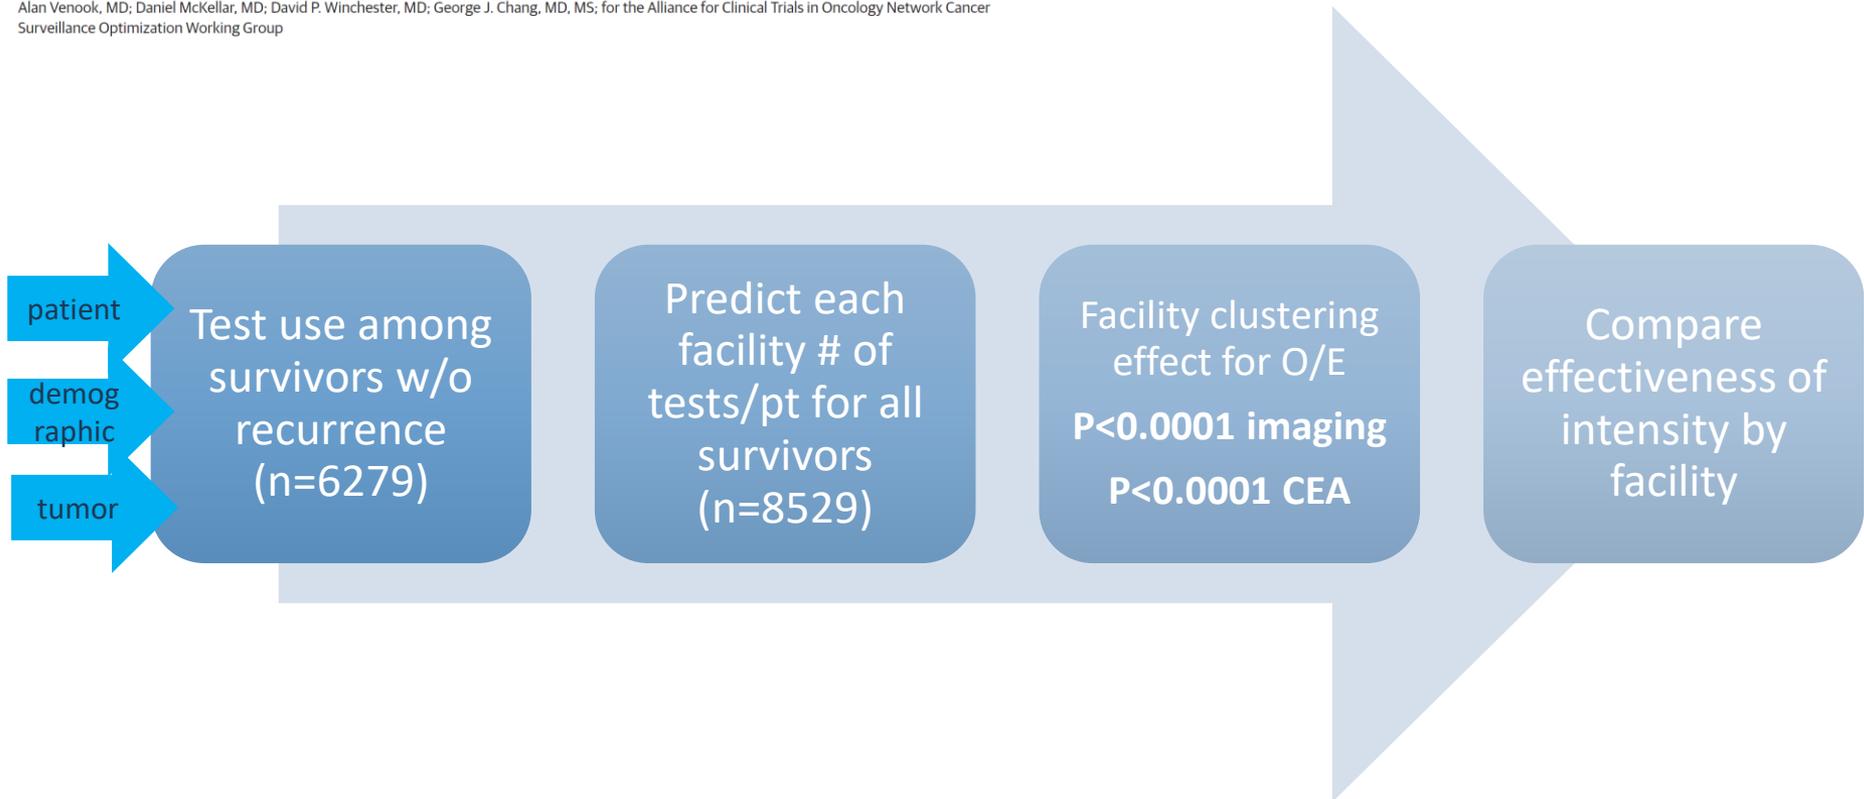

- Collaboration to improve process for recurrence ascertainment within the NCDB
- Random sampling of 10 colorectal cancer patients within each facility for primary data abstraction

JAMA | Original Investigation

Association Between Intensity of Posttreatment Surveillance Testing and Detection of Recurrence in Patients With Colorectal Cancer

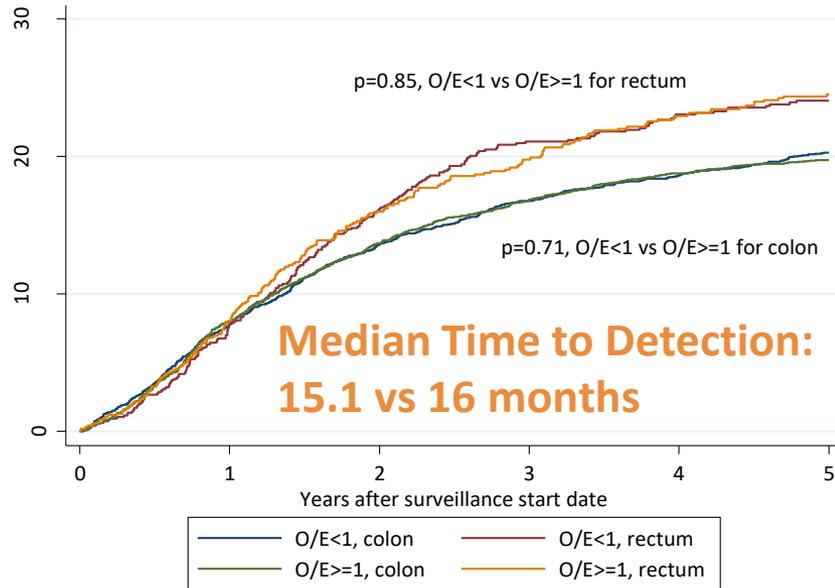

Rebecca A. Snyder, MD, MPH; Chung-Yuan Hu, MPH, PhD; Amanda Cuddy, MPH; Amanda B. Francescatti, MS; Jessica R. Schumacher, PhD; Katherine Van Loon, MD, MPH; Y. Nancy You, MD, MHSc; Benjamin D. Kozower, MD, MPH; Caprice C. Greenberg, MD, MPH; Deborah Schrag, MD, MPH; Alan Venook, MD; Daniel McKellar, MD; David P. Winchester, MD; George J. Chang, MD, MS; for the Alliance for Clinical Trials in Oncology Network Cancer Surveillance Optimization Working Group

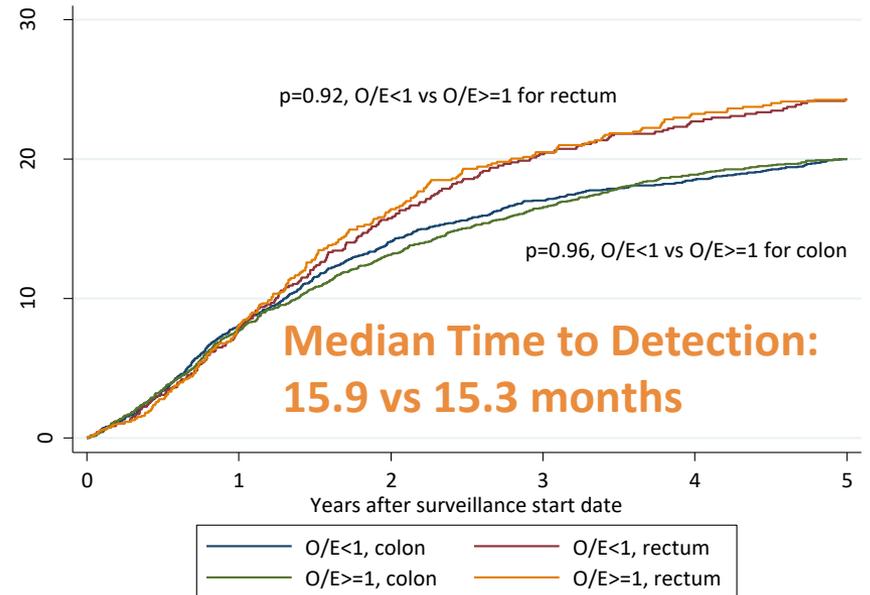

Intensity and Recurrence Detection

Mean **LI:1.6** (95%CI 1.6-1.7) **HI: 2.9** (95%CI 2.8-2.9) Mean **LI:1.6** (95%CI 1.6-1.7) **HI: 4.3** (95%CI 4.2-4.4)

IMAGING INTENSITY

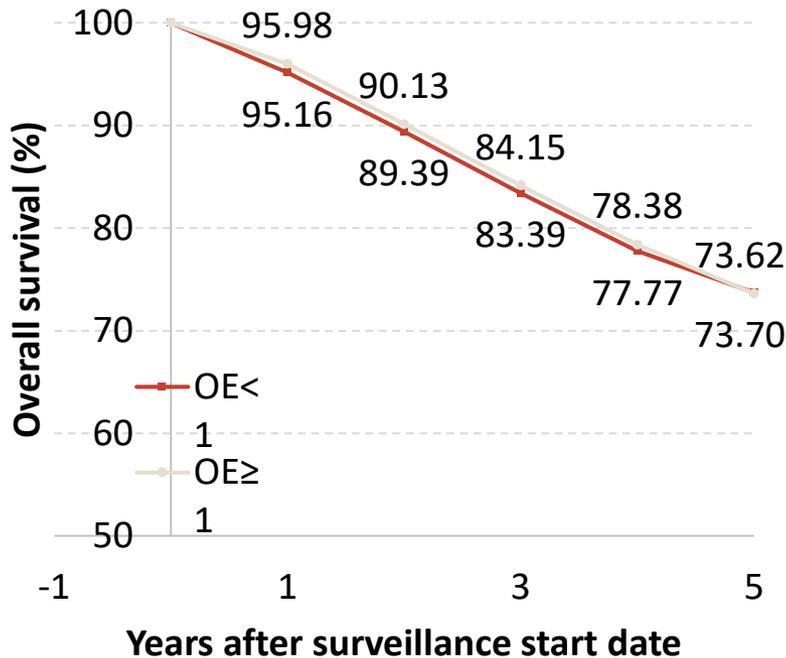

CEA INTENSITY

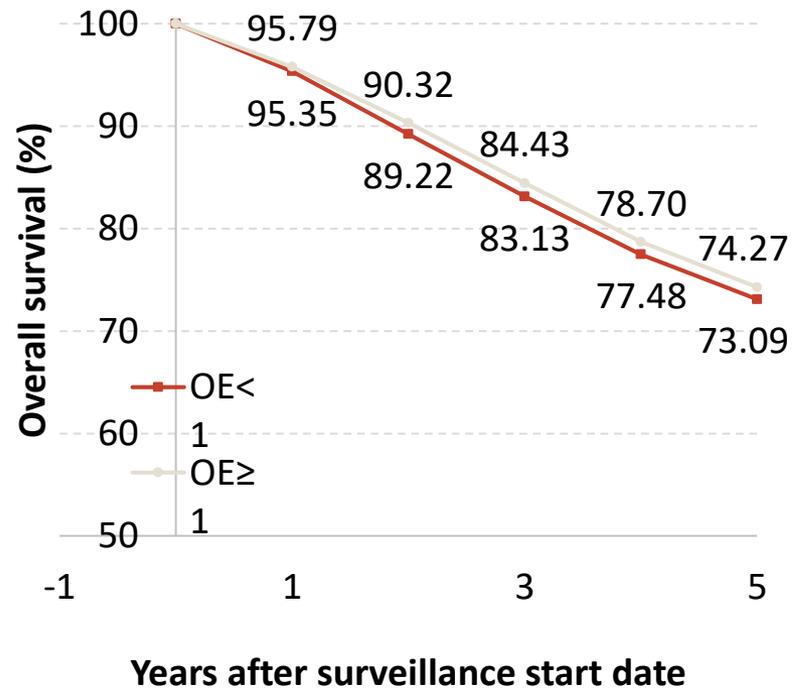

Intensity and Overall Survival

Mean **LI:1.6** (95%CI 1.6-1.7) **HI: 2.9** (95%CI 2.8-2.9) Mean **LI:1.6** (95%CI 1.6-1.7) **HI: 4.3** (95%CI 4.2-4.4)

Overall survival by **imaging test** intensity
(log rank test for OE<1 vs OE≥1 p=0.9118)

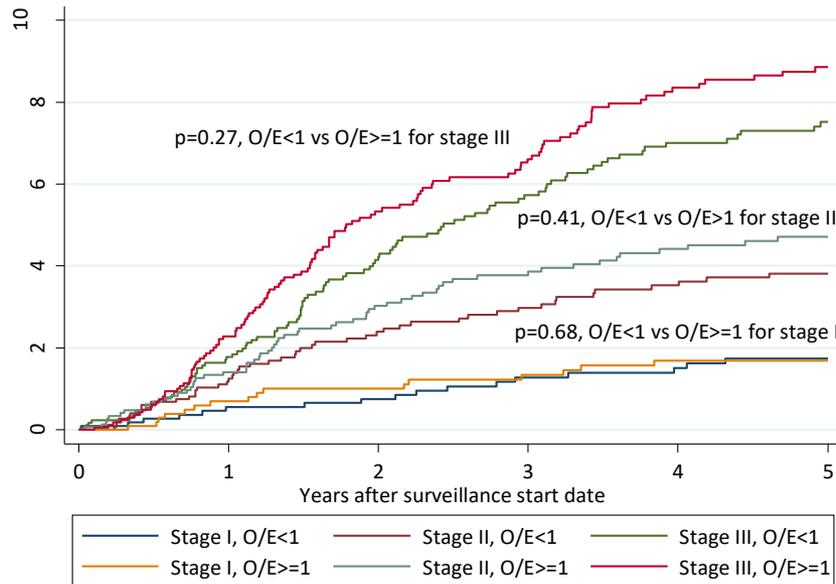

Overall survival by **CEA test** intensity
(log rank test for OE<1 vs OE≥1 p=0.1849)

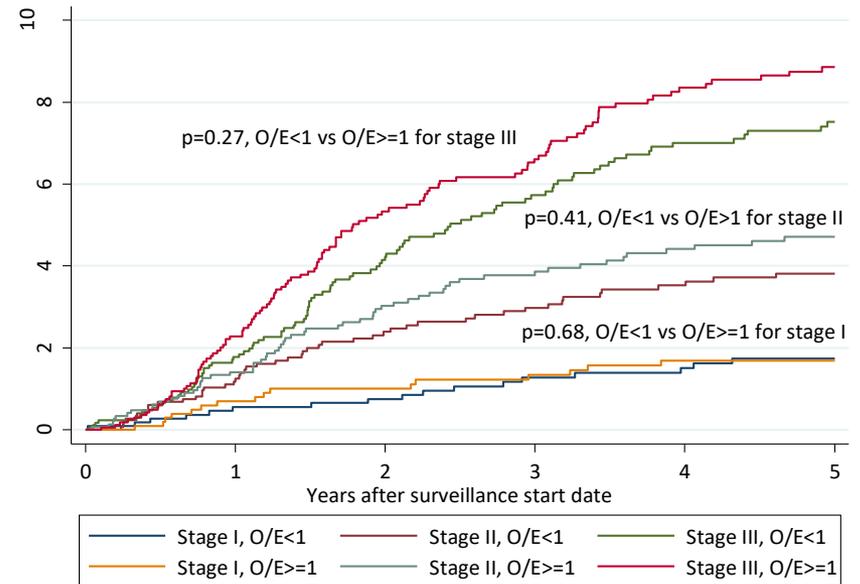

Intensity & Salvage Surgical Treatment

Mean **LI:1.6** (95%CI 1.6-1.7) **HI: 2.9** (95%CI 2.8-2.9) Mean **LI:1.6** (95%CI 1.6-1.7) **HI: 4.3** (95%CI 4.2-4.4)

IMAGING INTENSITY

CEA INTENSITY

JAMA. 2018;319(20):2104-2115. doi:10.1001/jama.2018.5816

Limitations

- Retrospective observational cohort study, not randomized
 - Cannot account for individual provider/patient decisions
- Surveillance intensity assigned by treatment facility
 - Additional in-facility variation may exist
- Data were collected on up to 10 patients per facility
 - Lower volume facilities could be over-represented
- Cohort was assembled in 2006-2007
 - Could result in variation in patterns of surveillance and surgery for recurrence
- Data is representative of broad, community-based practice
 - Higher rates of salvage surgery are observed at specialty centers

Summary

- Intensification of surveillance has a negligible impact on the detection of recurrence or survival
 - May slightly increase rate surgery for distant recurrence
 - No need to image more frequently than once/year
 - Earlier stage patients may require less follow-up
- Follow-up care should emphasize
 - Management of treatment associated toxicity
 - Health promotion and secondary prevention
 - Psychosocial well-being

REACTOR PANEL

Bruce Sherman, MD, FCCP, FACOEM

Chief medical officer for the National Alliance of Healthcare Purchaser Coalitions. Particular research interests in the areas of healthcare consumerism engagement, employer health benefits strategies and the business value of workforce health. Previously, he was the consulting corporate medical director for Wal-Mart Stores, Inc., Whirlpool Corporation, and the Goodyear Tire & Rubber Company.

Marianne Fazen, PhD

Executive Director for DFW Business Group on Health, an employer-led coalition of 130 Dallas-Fort Worth area employers and healthcare services organizations committed to improving healthcare quality, efficiency and accountability in North Texas. Ms. Fazen also serves as President and CEO of the Texas Business Group on Health, a statewide coalition representing the interests of Texas employers in healthcare purchasing and health policy issues.

Mark Weinstein, JD, CPA

Inaugural CEO of the Independent Colleges and Universities Benefits Association (www.icuba.org), a 16 year old self-funded, nonprofit Multiple Employer Welfare Arrangement (MEWA) serving 27 private Florida education employers, covering more than 16,000 members.

AUDIENCE QUESTIONS AND OPEN DISCUSSION

Employer Insights – Medical Advisory Council Overview

- The principles discussed here may apply to treatment of other cancer types
- Post-treatment surveillance can be highly emotional; education and support can help patients to understand the role of post-treatment monitoring
- The appropriate frequency of surveillance depends on the severity and likelihood of cancer recurrence, and should be addressed between patient and their physicians
- The accuracy of the radiographic surveillance testing can be as important as the frequency of the tests for the patient. Consider an imaging center of excellence strategy.
- Support and encourage efforts by professional societies to continuously evaluate and update practice guidelines

Wrap up, Reminders, Thank you
